

To Whom It May Concern:

The proposed Crematorium in Smithers shall be a welcome addition to our community. This service would provide peace of mind for families when they are vulnerable after the loss of a loved one. This, end-of-life service is urgently needed to address the aging and growing demographic of Smithers, and the surrounding communities. Please accept the proof put forth by the proposers, that the modern technologies and science of cremation will have negligible impact on air quality and emissions in the Valley. The research and effort put into this proposal should be worth the recognition from our community. Please consider this application be approved.
